

YEAST

ENARTISFERM VINTAGE RED

Yeast for red wines to be aged.

	<p>ORGANOLEPTIC CHARACTERISTICS</p> <p>EnartisFerm Vintage Red is a strain selected for producing “old world” style red wines destined for medium to long-term ageing.</p> <p>Its moderate and regular fermentation kinetics is suitable for long fermentation and maceration. EnartisFerm Vintage Red reveals grape aromatic characteristics and synthesizes fermentation aromas that are stable over time and intensify the varietal fruity aroma, without overpowering it.</p> <p>It produces a significant amount of glycerol and mannoproteins which contribute to wine structure and volume while softening astringency.</p> <p>Due to these effects on wine aroma and taste, EnartisFerm Vintage Red is also a good choice for the fermentation of unripe grapes.</p> <p>The effect on color stability is excellent due to the production of stable pigments via ethanal bridge.</p>																
	<p>MICROBIOLOGICAL CHARACTERISTICS</p> <table border="0"> <tr> <td>Species</td> <td><i>Saccharomyces cerevisiae</i></td> </tr> <tr> <td>Fermentation temperature</td> <td>15 - 32°C (59-89°F)</td> </tr> <tr> <td>Lag phase</td> <td>short</td> </tr> <tr> <td>Fermentation speed</td> <td>moderate: allows for long maceration and limits temperature peak.</td> </tr> <tr> <td>Alcohol tolerance</td> <td>≤ 16% v/v</td> </tr> <tr> <td>Killer factor</td> <td>killer</td> </tr> </table>	Species	<i>Saccharomyces cerevisiae</i>	Fermentation temperature	15 - 32°C (59-89°F)	Lag phase	short	Fermentation speed	moderate: allows for long maceration and limits temperature peak.	Alcohol tolerance	≤ 16% v/v	Killer factor	killer				
Species	<i>Saccharomyces cerevisiae</i>																
Fermentation temperature	15 - 32°C (59-89°F)																
Lag phase	short																
Fermentation speed	moderate: allows for long maceration and limits temperature peak.																
Alcohol tolerance	≤ 16% v/v																
Killer factor	killer																
	<p>ENOLOGICAL CHARACTERISTICS</p> <table border="0"> <tr> <td>Nitrogen needs</td> <td>medium</td> </tr> <tr> <td>Oxygen needs</td> <td>medium</td> </tr> <tr> <td>Volatile acidity production</td> <td>low</td> </tr> <tr> <td>H₂S production</td> <td>medium</td> </tr> <tr> <td>SO₂ production</td> <td>medium-low</td> </tr> <tr> <td>Glycerol production</td> <td>medium-high</td> </tr> <tr> <td>Acetaldehyde production</td> <td>high: good effect on color stability</td> </tr> <tr> <td>Compatibility with malolactic fermentation:</td> <td>high, it favors MLF onset.</td> </tr> </table>	Nitrogen needs	medium	Oxygen needs	medium	Volatile acidity production	low	H ₂ S production	medium	SO ₂ production	medium-low	Glycerol production	medium-high	Acetaldehyde production	high: good effect on color stability	Compatibility with malolactic fermentation:	high, it favors MLF onset.
Nitrogen needs	medium																
Oxygen needs	medium																
Volatile acidity production	low																
H ₂ S production	medium																
SO ₂ production	medium-low																
Glycerol production	medium-high																
Acetaldehyde production	high: good effect on color stability																
Compatibility with malolactic fermentation:	high, it favors MLF onset.																
	<p>APPLICATIONS</p> <ul style="list-style-type: none"> Red wine destined for medium to long-term ageing Varietal red wines Fermentation of unripe grapes 																
	<p>DOSAGE</p> <p>20-40 g/hL (1.67 - 3.3 lb/1000 gal)</p> <p>The highest dosages are recommended in cases of rotten grapes, high sugar content and/or difficult microbiological conditions.</p>																
	<p>INSTRUCTIONS FOR USE</p> <p>With rehydration:</p> <ul style="list-style-type: none"> Dissolve dry yeast in 10 times its weight of clean, warm (35-40°C or 95-104°F) water. Stir gently. Let suspension stand for 20 minutes, then gently stir again. Add rehydrated yeast to juice or crushed grapes when you start to fill the fermentation tank. The difference in temperature between rehydrated yeast and juice should not exceed 10°C (18°F). Homogenize by pump-over or mixing inoculated juice. 																

The indications given here correspond to the current state of our knowledge and experience, however they do not relieve the user from compliance with safety and protection regulations or from improper use of the product.

	<p><i>EnartisFerm Vintage Red can be used as a direct inoculant, if desired.</i></p> <p><i>Direct inoculation</i></p> <ul style="list-style-type: none"> ▪ Pour yeast directly into juice or must (temperature >15°C or 59°F) after or while filling the fermentation tank. <p>Attention - Alternatively, disperse the yeast in 10-20 parts of must (temperature >15°C or 59°F) while stirring slowly to avoid clump formation, then add to the volume to be fermented.</p> <ul style="list-style-type: none"> ▪ Pump-over to homogeneously distribute yeast in must. <p>Following the above-mentioned times and methods ensures maximum activity of rehydrated yeast.</p>
	<p>PACKAGING AND STORAGE CONDITIONS</p> <p>0.5 kg, 10 kg</p> <p>Sealed package: store in a cool (preferably 5-15°C or 41-59°F) and dry area. Opened package: carefully reseal and store as indicated above; use quickly.</p>
	<p>COMPLIANCE</p> <p>The product complies with: Codex Œnologique International.</p> <p>Product approved for winemaking in accordance with Reg. (EU) 2019/934</p> <p><u>Product approved for winemaking by the TTB.</u> Use within Enartis' recommended dosages.</p> <p>It contains E 491 Sorbitan monostearate</p>
